

K65[®]

TECHNICAL PERFORMANCE DECLARATION K65 – HIGH PRESSURE PIPEWORK SYSTEM

High pressure applications require components to have been tested and produced in line with European standards.

NB: The following performance declaration states the suitability of products for high pressure applications which are within the scope of the European Pressure Equipment directive PED.

Other than material and product standards, K65 represents a commonly developed system created by two of the leading manufacturers of ACR pipework.

Commonly developed means that:

- | the two companies work jointly to ascertain technical parameters, shape, size and mechanical characteristics of the products they manufacture
- | each company is aware of the confidential tolerances of the system products
- | these tolerances are mutually adopted and are part of the system architecture
- | the suitability of pipework made from the system components IS tested under common surveillance

K65 tubes and K65 fittings are certified products. The design of tubes and fittings is based on harmonized European technical standards.

Products which are not branded with the registered K65 trademark do not comply with the above tests and standards.

The producer's warranty of K65 products is based on the proper use of the system components as indicated in the K65 installation instructions.
